PROFESSIONAL SUMMARY

Electronics and Computer Engineering student passionate about VLSI design, semiconductor technology, and software development. Proficient in Python and C, with a strong interest in problem-solving, digital electronics, and hardware design. Eager to apply technical knowledge through hands-on projects and continuously develop skills in chip design and verification.

EDUCATION

B.Tech In Electronics And Computer Engineering 2025-2029
APJ Abdul Kalam Technological University

WORK EXPERIENCE

Student Project Developer 2024-Present
Personal / Academic Projects

- Developed software projects using React.js, Firebase, Python, and C. Built practical applications to
- strengthen programming, problem-solving, and software development skills. Interested in expanding
- technical expertise in digital electronics, VLSI design, and semiconductor technology.

PROJECTS

Neko – Anime Discovery & AI Chat Platform

Tech: React.js, JavaScript, Firebase, AI APIs, CSS

Developed an anime-focused web application featuring anime discovery and personalized watchlist management. Integrated authentication to protect user-specific features and implemented an AI-powered chatbot for interactive conversations. Designed the platform to allow users to explore and chat without logging in, while requiring authentication to save watchlists and chat memory. Focused on building a responsive user interface and improving the overall user experience.

SKILLS

C, Python, JavaScript, React.js, Firebase, HTML, CSS, Git, GitHub, Problem Solving, Digital Electronics, Boolean Algebra, Basic Machine Learning, Responsive Web Design

CERTIFICATIONS

Tata GenAI Powered Data Analytics ,IoT Workshop ,ISTE
